

Lemon Cypress

☀️ Medium to High Light, Direct Sun, 3 to 5 Hours is best.

☔️ Only slightly dry between waterings. Water regularly in spring and summer. Keep moist but not wet in fall and winter.

🌡️ Keep cool indoors.

✂️ USDA Zone 8

ⓘ Plants are a lime green color when grown indoors; color will change to a golden yellow when placed in full sun. Trim new growth to maintain shape if desired.

Place outside after frost. Fertilize once or twice a year with Mir-acid. To keep the leaves looking healthy, periodically rinse the leaves with a mild soapy water. To maintain the shape of your topiary, new growth may be trimmed.

Your topiary will need to be repotted every two years to keep it from becoming rootbound. Remove the plant from its pot and gently loosen the root ball. Plant it in a container at least 1 to 2: larger. Add additional soil to fill the space. Water immediately and maintain the moistness until the plant has taken root in the new space.
